DATASTOR ASSURED RECOVERY (DAR) BY KELYN

Comprehensive ransomware protection and recovery, at scale.

Superior data security and flexibility: DAR keeps copies of your data that attackers can't reach or change, and gets you back to a clean point fast. It runs on Datastor: Commvault data protection on AWS, managed by KELYN.

WHAT YOU GET

Four layers between ransomware and your data.

01

Secure air-gapped storage

Isolated copies, stored independently from primary environments, put a barrier between your backups and an attacker.

02

Tamper-proof immutable storage

Backups can't be altered or deleted, with multi-layered zero-trust access controls around every copy.

03

Instantly scalable

Expand without new hardware: fast deployment, simple administration and capacity that grows with your data.

04

Granular recovery

Restore exactly what you need, from a single file to a full environment, with point-in-time and bulk recovery tailored to your needs.

WHY KELYN

Built for the most demanding organizations.

KELYN is a Commvault Elite MSP Partner and the 2023 Commvault Americas Federal Partner of the Year. Our U.S.-based engineers design, run and test DAR for government and enterprise teams, with support 24/7, so recovery works when you need it. Learn more at datastor.io.
